---

The first step in the installation process is to create the key pair on the client machine, which would, more often than not, be your own system.

1. [linux create user](#)
2. [linux create user group](#)
3. [linux create user home directory](#)

The syntax is as follows: useradd. If you did not create at least one account (not including the root account) you should do so now.. Manage Linux user account is a very important task in Linux It begins with creating a user account and creating password for that particular user account and then, you might have to assign group for that user.. Maybe at one time you might have to change a user particular (user information) such as update telephone number or department where the user works.. You will be provided with the commands and descriptions needed for working with users, groups, and directories.
